Subject: Ethics Complaints RE: Radionuclides Rule Violations In Bethpage & Hempstead Townts
Attachments: Ethics-Complaint-4_17_14.pdf; Ethics-Supp-4_28_14.pdf

Dear Polly (reporteratlarge.com & theloopny.com): Recall your first email below dated 1 Oct 2013?

Last Wednesday I submitted the attached "Ethics-Complaint-4_17_14.pdf" against **County Executive Steve Bellone, Legislator William Spencer, M.D., SCDHS & SCWA officials** to each County Legislator after my presentation "**Radon Not Nitrogen is Public Enemy No. 1**" to the Consumer Protection Committee. The only Committee member that stayed awake and asked questions was Leg. Hahn.

Today I sent the attached "Ethics-Supp-4_28_14.pdf" after receiving a confirmation letter stating:

- *"Please be advised that the reasonable cause vote is calendared for the next meeting of the Suffolk County Board of Ethics scheduled to be held April 23, 2014."*

It's based, in part, on your work for the "**What's in the Water**" Town Hall Meeting. It's a pity NEWS12 & Newsday editors care more about real estate values than a child's health.

- On rare occasions connected-politicians & corrupt EPA officials *Reap What They Sow*.

Carmine

I look forward to talking about this with you tomorrow morning, about 10 am?
Can you explain what we mean by "sum of the fractions" results? Are some entities not adding fractions?
Polly

Ethan: If only you had these results before the NEWS12 Special last Thursday so Claudia or Deanna could have polled the panel to see if they believe their children are also immune from radionuclides like those found in Levittown & Bethpage wells in 2006.

Based on your spread sheet, which has 2,278 rows of test results – with no Sum-of-the-Fractions (SOF) results, your Civics now have justification to FOIL the NYDOH expert cited in the attached “SOF-FOIL & REPLY-9_11_13.pdf” to add a column headed Annual BETA/PHOTON Dose (MREM) for both man-made & naturally occurring radionuclides in secular equilibrium with their sources. To help facilitate this, I used your spread sheet to make the attached 92-page, searchable-PDF with 2,333 test results, entitled:

Table B: EXCERPTS From NYSDOH FOIL RESPONSE #13-05-448 (6/25/13 Received 9/30/13 Show 2,333 Test Results & Dozens of SDWA Violations In Public Wells Serving TOWN OF HEMPSTEAD & BETHPAGE IN 2006. Violations Include: No Tests After 2006 or Required Test Results for: (a) PHOTON Activity, (b) Radium-226, (c) Uranium, (d) BETA Activity & (e) Dose Calculations in mrem/yr

It explains why the H2M Rep evaded Deanna's & Claudia's questions, for he knew or should have known there were hundreds of violations of the Radionuclides Rule in 2006 and Radium-228 levels are not decaying according to natural law.

Unlike your 1st FOIL response, which had no Uranium results, this one shows lots of Uranium in Levittown Wells. You and those copied may want to ask the H2M expert to explain the following note that first appears in Row 68 (LEVITTOWN WELL 12) and last appears in Row 2,278 (LEVITTOWN WELL 8A): **GROSS ALPHA, EXCL. RADON & U.**

It will be interesting to learn how H2M can tell which Alpha particles come from Radium-226/228, Uranium and which come from Radon --- the leading cause of lung cancer in non-smokers.

Today I received the NYSDOH supplemental response to my FOIL. My request was for any and all water testing results pertaining to radionuclide testing from 1970 - present for all water districts in Hempstead and Oyster Bay towns. The excel spreadsheet is attached.

All...why we have to be alert at all times...!!!

On Monday, September the 30th, the Suffolk County Legislature Environment Committee has a Introductory Bill before it that offers only a brief and marginal opportunity for the public and water quality experts to be heard and to provide meaningful input. SC Leg Spencer (D-Hungington) is submitting a Bill to create and establish a joint (Nassau Suffolk) Long Island Aquifer Protection Commission.

Clearly, the protection of our aquifers requires more than an absurd hearing or just the creation of one more commission or authority. We think that the plan may be a concept actively advocated by some, but without widespread and sufficient community input and education may well turn out to be very poor policy. We think it is time to adopt real change. This plan, moving forward largely off the radar, is entirely premature and lacks sufficient scientific and other relevant and important data studies to decide if and what is the best way to provide real protections for LI's drinking, ground and surface waters. Also it doesn't seem to be really based in science or at all comprehensive...

Our water is to important for just another public commission or authority created and staffed by political hacks...we all know well how that concept doesn't work.

Bill i1565 is scheduled to be considered before the SC Legislature's Environment Committee on 9/30 at 2pm at the Roger Auditorium on Vets Highway in Hauppauge...
